Digitrix II: Interchangeable Anvil Series

▲ Digitrix II #54-911-281 (0-6" Interchangeable Anvil).

Combines the economy and wide range of an interchangeable anvil design with the advantages of the Digitrix II Computerized Micrometer.

The Interchangeable Anvil Digitrix II series consists of a specially designed, lightweight and well balanced frame. Equipped with a standard Digitrix II micrometer head and anvil section for rapid interchange of high precision anvils.

A selection of anvils is included with each set as well as the appropriate setting standards, wrench, deluxe wooden case, etc.

This series offers the advantage of covering an exceptionally wide range of measuring capacity—yet at a cost much lower than by obtaining individual micrometers for each

size needed. Each interchangeable anvil in this series covers a full 1" (25mm) range.

The Digitrix II Advantage:

- Includes all the features of the original Digitrix II Computerized Micrometers.
- True inch/metric conversion. Large LCD is easily read to .0001" (.001mm) with a .00005" indicator.
- Output allows connection to the QC Printer/ Calculator, data-loggers and interfaces for SPC applications.
- Satin chrome finish, carbide tip anvils, ratchet thimble and locking knob.
- "Hold" feature holds values in the display.
- Absolute/relative modes allow measurements of the true size or comparison measurements of part to master.
- Uses 2 #54-902-110 batteries (included).

Order No.	Description
54-911-281	0-6" (0-150mm) Interchangeable Anvil Digitrix II Set.
54-911-282	6-12" (150-300mm) Interchangeable Anvil Digitrix II Set.
