

#52-279-000—Fowler's Demagnetizer effectively removes surface residual magnetism from high speed steel, nickel steel, chrome, spring steel or die steel.

- As the magnetic poles contact object to be demagnetized, residual magnetism is released.
- Thick objects may be demagnetized by applying both ends to the demagnetizer.
- 110 volt/single phase current.
- Features an on/off switch.

▲ Demagnetizer #52-279-000.

#52-585-050—Magnetic Adjustable Links are used primarily for quick clamping of light steel sheets one to another at any angle. Blocks can be used singly as the basis for jigs.

- Adjustable to any angle and firmly secured by wing nuts.
- Two permanent magnets for convenient joining of parts in drilling, scraping, welding, and more.
- Lightweight and easy to position and remove, adjustable links are ideal for welding, positioning and in general assembly applications.
- Price includes fitted box.
