1 Fixing principles for different types of hollow shafts

1.1 Blind hollow shaft with clamping ring and stator coupling

If space is limited radially, a good solution is to choose an encoder with a blind hollow shaft. This feature makes an axial output possible, which avoids adding anything to the radius. To prevent the encoder rotating with the shaft, it is fitted with a flexible stator coupling, which has also been designed to add as little as possible to the radius.

- Key characteristic: Minimal radial space
- Fixing: Clamping ring
- Available in the 600 and 500 serie

1.2 Through-going hollow shaft with clamping ring

This assembly is the most space-efficient axially. The encoder's hollow shaft is mounted directly on to the mating shaft, meaning there are no protruding shafts or intermediate couplings taking up valuable space. A clamping ring is used to fix the encoder to the mating shaft.

- Key characteristic: Short build length
- Fixing: Clamping ring
- Available in the 800, 700, 600 and 500 series

1.3 Blind hollow shaft with axial fixing screw

A common fixing solution is to secure the encoder's hollow shaft to the mating shaft using an axial screw. With a prepared mating shaft, assembly can be performed quickly and easily, during both manufacture of the machine and servicing. This solution also facilitates the process of centering the encoder to the mating shaft.

- Key characteristic: Easily accessible assembly
- Fixing: Axial screw
- Available in the 800, 600 and 500 series

 = Part from customer

2 Mating shafts

2.1 500 series

2.1.1 Blind hollow shaft with clamping ring (with/without stator coupling)

Dimensions [mm]

Ød	Tolerance
8	js6
10	js6
12	js6
14	js6
15	js6

2.1.2 Through-going hollow shaft with clamping ring (with/without stator coupling)

Dimensions [mm]

Ød	Tolerance
8	js6
10	js6
12	js6
14	js6
15	js6

2.1.3 Blind hollow shaft with axial fixing screw

Dimensions [mm]

Ød	Tolerance
12	js6

When a 26 mm mating shaft is used the recommended screw length is 20 mm. If the shaft is made shorter the length of the screw must be prolonged accordingly so that minimum 9 mm thread is in use.

2.2 600 series

2.2.1 Blind hollow shaft with clamping ring and stator coupling

Dimensions RHA series [mm]

Ød	Tolerance	L = Min/Max
12	g7	11 / 21 mm

Dimensions IHA/IHI series [mm]

Ød	Tolerance	L = Min/Max
8	js7	11 / 31 mm
10	js7	11 / 31 mm
12	g7	11 / 31 mm
14	g7	11 / 31 mm
15	g7	11 / 31 mm

2.2.2 Through-going hollow shaft with clamping ring and stator coupling

Dimensions [mm]

Ød	Tolerance
12	g7

2.2.3 Blind hollow shaft with axial fixing screw

Partial depth intrusion

Full depth intrusion

Dimensions [mm]

Ød	Tolerance
16	js6
20	js6

2.2.4 Tapered shaft 1:10 (IBI 6x1)

2.3 700 series

2.3.1 Through-going hollow shaft with clamping ring

Dimensions

Ød	Tolerance
12 mm	g6
14 mm	g6
16 mm	g6
20 mm	g6
25 mm	g6
5/8 inch	g6
3/4 inch	g6
1 inch	g6

2.4 800 series

2.4.1 Blind hollow shaft with axial fixing screw

Dimensions [mm]

$\varnothing d$	Tolerance
12	js6
16	js6

When a 53 mm mating shaft is used the recommended screw length is 16 mm. If the shaft is made shorter the length of the screw must be prolonged accordingly so that minimum 9 mm thread is in use.

2.4.2 Blind hollow shaft with axial fixing screw and keyway

Dimensions [mm]

$\varnothing d$	Tolerance
12	js6

When a 53 mm mating shaft is used the recommended screw length is 16 mm. If the shaft is made shorter the length of the screw must be prolonged accordingly so that minimum 9 mm thread is in use.

2.4.3 Through-going hollow shaft with clamping ring

Dimensions

$\varnothing d$	Tolerance
1 inch	g6
25 mm	g6

2.4.4 Taper hollow shaft with axial fixing screw

Recommended screw length 25 mm, minimum 8 mm thread in use.

2.5 900 series

2.5.1 Taper hollow shaft with axial fixing screw

Recommended screw length 25 mm, minimum 8 mm thread in use. Max screw head diameter 10,5 mm.

2.5.2 Blind hollow shaft with axial fixing screw

When a 53 mm mating shaft is used the recommended screw length is 16 mm. If the shaft is made shorter the length of the screw must be prolonged accordingly so that minimum 9 mm thread is in use. Max screw head and washer diameter 10,5 mm.

2.5.3 Blind hollow shaft with axial fixing screw and keyway

Recommended screw length 16 mm, minimum 9 mm thread in use. Max screw head diameter 10,5 mm.

2.6 FSI 800 series

For mounting of the FSI 862 encoder with hollow shaft, the mating shaft is required to have dimensions as given.

2.6.1 For hollow shaft with keyway

Shaft material characteristics

Rm min	500 MPa
Rp 0,2 / Rel	300 MPa
Coefficient of thermal expansion	10-12*10e-6

2.6.2 For hollow shaft with key

Shaft material characteristics

Rm min	500 MPa
Rp 0,2 / Rel	300 MPa
Coefficient of thermal expansion	10-12*10e-6

2.7 FSI 900 series

2.7.1 Shaft interface 20 hk

Shaft length L (mm)	Min screw length L (mm)
47	17
48	16
49	15

3 Shaft runout (all series)

Check the encoder's radial runout with slow rotation of complete assembly. The runout should not exceed 0.1 mm, as this may shorten the encoder's service life or influence the system accuracy.

4 Torque arms (800,700 and 600 series)

Fix the encoder with an insulated torque arm. It must be fitted at 90 degrees angle to the direction of the bracket, for optimum accuracy of measurement.

4.1 Accessory torque arms (to be ordered separately)

4.1.2 Mounting with M6 torque arm

Part number 1254632-xx (800,700 and 600 series)

4.1.3 Alt. mounting with M5 torque arm

Part number 1254627-xx (800 series)

 = Part from customer

 = Accessories from Leine Linde

The best encoders and sensors are those you never have to think about. Those that simply do their job – year after year. Leine Linde develops and manufactures customized encoder and sensor solutions for demanding environments, advanced measuring systems for accurate feedback of speed, position or strain.
